E-Z Out Hopper Access Door

APPLICATIONS

Trailers with conical hoppers. The Easy Out Access Door opening is located near the bottom outlet and opposite the 3-port manifold so the Access Door does not interfere with the aeration hoses. The lower portion of the opening is located approximately 3 ½ " (90 MM) from the bottom outlet flange.

Other conical hoppers. The Easy Out Access Door can be located where the Access Door fits the outside contour of the hopper.

Square hoppers with flat sides. The door can be located in any convenient place.

CAUTION: DO NOT OPEN DOOR WHILE TANK IS LOADED OR UNDER PRESSURE

E-Z Out Template

To locate the Access Door properly –

1. Cut off the lower left corner of the paper template and cut out the shaded area in the middle of the door opening on the template drawing.
2. Tape it to the hopper and trace the opening with the larger portion up.
3. Remove the template and cut the hole in the hopper with a plasma arc (or sabre saw). The reinforcement channel on the exterior of the door will locate the door – **do not make the opening too big.**
4. Deburr the edges.
5. Fit the stainless steel yoke which extends on each side of the Access Door over the threaded steel bolt projecting from the back of the door. The yoke is held in place by a tee-handle.
